Calculation of Annual Percentage Rate

Loan interest is calculated based on the nominal interest rate. Whereas, the annual percentage rate shows the cost of the loan, if the interests and other fees are paid according to the repayment schedule. The Annual Percentage Rate depends on the loan terms (loan amount, maturity, amount of installments and number of installments).

Annual Percentage Rates shall be calculated based on the following formula:

$$A = \sum_{n=1}^N \frac{K_n}{(1 + i)^{\frac{D_n}{365}}}$$

where:

A credit sum (initial size of credit provided to consumer by creditor).

n number of the repayment directed to credit coverage

N number of the last repayment directed to credit coverage

Kn amount of the n repayment directed to credit coverage

Dn time span between the day of credit extension and the day of making the n repayment directed to credit coverage, expressed by number of days

i Annual Percentage Rate (APR), which can be calculated if the other data of the formula are known from loan agreement or any other way
